Evidence based practice requires that decisions are taken following a critical review of the available data before being transformed into effective decisions. In organizations where risks are high and critical decision times are short, evidence requires a means through which it is sieved and refined to provide quicker and more reliable courses of action. Understanding the dynamics and the role that technology may play in this scenario contributes towards improving natural decision making in organizations thus facilitating managerial processes and attainment of goals.

Suggested topics include but are not limited to:

- Decision making under stress
- Human and organizational dynamics for integrating new technology in the decision-making process
- Dashboards for Business management running on AI & Analytics
- Evidence based training to support quality making
- Cognitive Reflection in decision making on the strengths of quantifiable data

**Ryan Azzopardi** is a professional within the Airline industry. He is also a Henley Business School Alumni and a Business Development Strategist. Ryan has developed innovative projects within the beverage & Real Estate industry. Through his company Capital Alliance, Ryan has provided Consultancy services in Malta and North Africa while serving the Hospitality, Medical, Commercial, Infrastructure and Residential market sectors.
